

Bulgarian Center for Sustainable Local Development and Ecopedagogy

We sincerely welcome Cities to re-consider the mega-consumer culture and to join

The Nature's City Global Project

It is 2017! The City as a Hi-tech complex Consumer system and as an artificial World of Technologies parallel to the World of Nature cannot be sustained any longer. Time for progress – the very Consumer City is globally recognized as a **Crime** – a form of destruction of Natural Life, Human Beings and the planet Earth.

Now the Human Civilization launches the **Nature's City global Project**. **The nature's City** represents a realistic way to start Sustainable multidimensional transformation of **Cities** and to launch **Green Jobs and Green Economy programs**. It is based on **2 Fundamental Sustainability Interventions** in the City.

First one: Creating City Green Networks of Nature's Roads, Parks and Sustainability Gardens

1st Step - Selecting and Transforming some **Traffic Roads** into “**Green Roads**”.

2nd Step – Transforming some **Non-traffic Roads** into “**Nature's Roads**” (for example Fruit's Roads, Berries' Roads, Natural Art Roads, etc.)

3rd Step – Connecting **Existing Parks** by a Network of **Green Roads** and **Nature's Roads**.

4th Step – Expending **Parks and Green Spaces** and creating **Sustainability Gardens** as places for **Urban Agriculture, Ecological Socialization and Sustainability Education**.

Second basic Intervention – creating Green Economy, Green Jobs and Sustainability Education

Green economy is one sustaining Nature's World and All of Life; Organic, productive, restoring and protecting the Earth as a world of Nature, it is an economy **for all the Living creatures.**

EcoAgriculture and eco-Food stay at the heart of the Nature's City. Small-scale eco-agricultural systems organized around families, friends, homes and communities eliminate agriculture and food based on chemistry, genetically modified and cloned organisms, and Multinationals monopoly.

Reforestation, Afforestation and Agroforestry offer to youngsters and adults a plenty of enjoyable and healthy jobs full of life, future and beautiful experiences.

The Conservation of Nature, of Soils, Drainage basins and Ecosystems offers another sector of green jobs.

Ecotourism and Agrotourism replace the unsustainable and eco-destructive models of intensive tourism.

Energy is produced ecologically and locally by mini Eco-power stations for a neighborhood, street or household.

Eco-Transport Systems. The Nature's City is designed in a way it makes possible the use of any kind of eco-transport vehicles – bikes, trams, new types of eco-public cars etc.

Buildings among the Nature not Nature among the Buildings. Constructions in the Nature's City don't mean destruction of Nature, but are designed **as an organic part of Nature.**

Nature's cities are centers of Sustainability education and new Ecopedagogy of life, places for Ecological Schools, Ecological Universities and Humanizing Education.

Societies and Systems that survived in history are example of *Simple* systems.

Sustainable progress is one full of Life, Natural and organic!

So, Let's make sustainable progress, let's start the Nature's City; a place where creative *Love, Joy, Play and Hope* replace the *mega-Consumer Culture.*
